

For faster assembly and  
stronger, rivet-free sidewalls,  
Utilimaster bonds its  
DuraPlate® bodies with  
**PLEXUS** Adhesives

**Bonded DuraPlate® Construction:  
Faster Manufacturing, Lighter,  
Stronger Bodies, and No Rivets**

Polyethylene core sandwiched between sheets of high-strength galvanized steel, DuraPlate® panels produce truck and parcel delivery van bodies that have no interior posts for maximum cargo capacity and minimum tare weight. By bonding these panels with Plexus adhesives, Utilimaster produces stronger, lighter, virtually seamless truck bodies with rivet-free sidewalls for graphics — in less time and at lower costs!

**Flexible Metal Bonding Adhesives**

Plexus Metal Bonder™ Adhesives bond metals, thermoplastics, composites, and dissimilar substrates without primers. They cure rapidly at room temperature and produce exceptionally strong bonds with superior flexibility and fatigue resistance — even at extreme temperatures.
