

# To reduce weight without sacrificing strength, Comptank relies on **PLEXUS** Adhesives

Comptank FRP Tank Trailer  
[www.comptank.com](http://www.comptank.com)

## Stronger, Lighter Composite Tank Trailers

Comptank filament wound FRP tank trailers are three times stronger than steel and corrosion resistant inside and out, yet weigh significantly less than metal trailers. They are designed to withstand chemical corrosion, vibration, impact, temperature extremes/cycling, and UV. The composite hose trays, walkways, safety railings, supports, toolboxes, and external fixtures on these trailers are bonded using Plexus Adhesives.

## Bonds Stronger Than the Composites Themselves

Plexus "Fiberglass Fusion" Adhesives chemically cross-link composites at the molecular level into a unitized assembly. They create bonds so strong that the composites will delaminate before the bonds fail.

## Next Generation Adhesives for Next Generation Trailers

Designed for bonding today's engineered plastics, advanced composites, metals, and dissimilar substrates, Plexus Adhesives are used by major vehicle manufacturers worldwide to achieve weight reductions and improved performance without sacrificing strength or durability.
