

For wreckers that look better than the vehicles they tow,
Jerr-Dan relies on **PLEXUS** Adhesives.

Brawny Trucks with Superb Automotive Finishes

A leader in the manufacture of recovery vehicles, Jerr-Dan designs and builds wreckers that set new standards for styling and aesthetics as well as performance. To produce these lightweight, durable, truck bodies with aircraft quality construction, the company uses Plexus Fiberglass Fusion Adhesives on its newest models.

Advanced Adhesives Bond Dissimilar Materials

With the ability to bond engineered plastics, advanced composites, metals, and dissimilar materials, Plexus Adhesives help designers deliver weight reductions and improved performance without sacrificing strength or rigidity.

Revolutionizing Vehicle Design and Manufacture

Plexus Adhesives speed and simplify production. They require virtually no surface preparation, eliminate grinding and sanding, cure rapidly at room temperature, and minimize dust and the need for toxic solvents. They produce exceptionally strong bonds with superior flexibility and resistance to impact, fuels and chemicals, temperatures, UV, and cyclic loading.
